International Summit on Psychedelic Therapies for Mental Illness

Introductory Workshop for Psychedelic Therapies (17 and 18 November 2021)

This Introductory Workshop for Psychedelic Therapies will run over two days prior to the **International Summit on Psychedelic Therapies for Mental Illness**. This will be a first-of-its-kind opportunity in Australia for those wanting to gain direct insight and training into this approach from international therapists in the field.

The workshop will introduce participants to various approaches in psychedelic treatment for mental illness.

This workshop is **open to anyone with an interest in the topic** and who is considering further development of their current therapeutic skills. It is particularly for those who are aiming to work in this field as and when these therapies become legally available in Australia.

It will cover an **introductory background history to psychedelic medicines, how they work and how they are applied in research and clinical settings**. There will be a significant **practical component focussing on integration of experiences** – how to understand and use the kinds of experience commonly encountered when using these substances for better self-understanding and how trained therapists might help someone apply them in their own lives.

While not providing a qualification of any kind, attendees can obtain non-accredited **Continuing Professional Development (CPD) certificates** (related to your professional registration) for attending.

Medicine-assisted therapy is not yet legal in Australia, outside of a research context. However, given the impressive early clinical evidence to date, and the near-term regulatory changes predicted in the US and EU subject to forthcoming data, these workshops will contribute to **preparing the Australia context** for regulatory changes in the coming years.

The workshops will cover all three phases of medicine-assisted therapy: **preparation, medicine session, and integration**. Workshops will incorporate the theoretical (neuroscience, psychology, psychotherapy), practical (instruction in methods of service provision), and experiential elements of treatment (process learning that deepens and develops clinicians' capacity).

Mind Medicine Australia Summit – 2-day Introductory Workshop on Psychedelic Therapy

Venue TBC

(Preliminary program – subject to change)
